THE STRENGTH OF CONCRETE

HARNESSED IN **FREE FORM POOL SHAPES AND FLOORS**

BLOKIT®SYSTEM's particularity lies in its modular formwork blocks. Formwork can be built much more easily, much faster and much more cleanly than conventional formwork.

This reduces the impact on your garden and shortens the time required to build your pool.

BLOKIT®SYSTEM modules are designed and manufactured in adherence with the most stringent industrial standards. It is a quality product.

**Both a formwork block and an insulated box:
a simple, clever design.**

BLOKIT®SYSTEM

three advantages in one ingenious concept

- 1 Modular, lightweight formwork that fits together rapidly:**
fewer complications, less work.
- 2 Efficient insulation:**
warmer water.
- 3 Smooth inner surfaces:**
the pool walls have a perfect finish, even under the unforgiving pool lights.

BLOKIT®SYSTEM double layer of insulation.

In addition to their exceptional strength, BLOKIT®SYSTEM pools are protected by the two thick, insulating walls of the formwork modules. The modules create one insulating layer between the water and the concrete, and another between the concrete and the earth. This produces a Thermos effect that keeps the pool water significantly warmer than that in an ordinary pool.

**Between 3° and 5° WARMER
in a BLOKIT®SYSTEM pool
than in a conventional pool.**

THE STEPS

Steps built into the main structure

The steps are integrated into the main structure of the pool so they are completely encircled. This technique guarantees the mechanical strength of the construction.

Roman or straight, in a corner, etc. to embellish and enhance your pool, the choice is endless.

ROBUST, TRIED AND TESTED WATERPROOFING WITH **SUPERLINER V2F 0.85 MM**

BLOKIT®SYSTEM uses Superliner V2F, the last word in liners. Perfectly leaktight, exceptionally resistant to stains and the action of ultra violet light, it retains its good looks and pliancy over the passing years.

Superliner V2F has already been fitted to over 100,000 pools world-wide, making it the reference for pool professionals. With Superliner, you are guaranteed complete peace of mind for many years.

colours to suit all tastes

Liners come in blue, green, beige, grey...

Choose green for water with a caribbean green look.

To make the water appear dazzling blue, choose blue.

If you prefer water that changes colour to reflect the mood of the sky, choose grey or beige.

HIGH BATHER LOAD

Reinforced PVC membrane:
resilient and hard-wearing.

If your pool has a high bather load, or plays host to rather reckless swimmers, or if you rent or loan your home out during the summer, you could opt for a reinforced PVC membrane (ALKORPLAN).

Alkorplan reinforced PVC membranes can withstand the harshest treatment and the most careless swimmers. This is why they are a frequent choice for commercial pools. Even though they are thick and resilient, they are supple enough to fit over the most complicated shape.

Important: reinforced membranes must be fitted by a qualified professional.

Superliner V2F is made by the leading French manufacturer of waterproofing membranes, the only company able to guarantee millimetre accuracy of cuts and the industrial quality ultrasonic welds.

THE EFFICIENCY OF A TRADITIONAL FILTRATION SYSTEM

The purity of your water, the pleasure you take in bathing and the ease of maintenance of your pool all depend on the efficacy of the filtration system.

To guarantee crystal clear, pure water, **BLOKIT®SYSTEM** recommends a traditional sand filter. Your advisor will study the demands of your installation and recommend the right models for you.
